

An Introduction to Infinite Facade™

 **INFINITE FACADE™**

**Infinite
possibilities™**

Infinite Facade

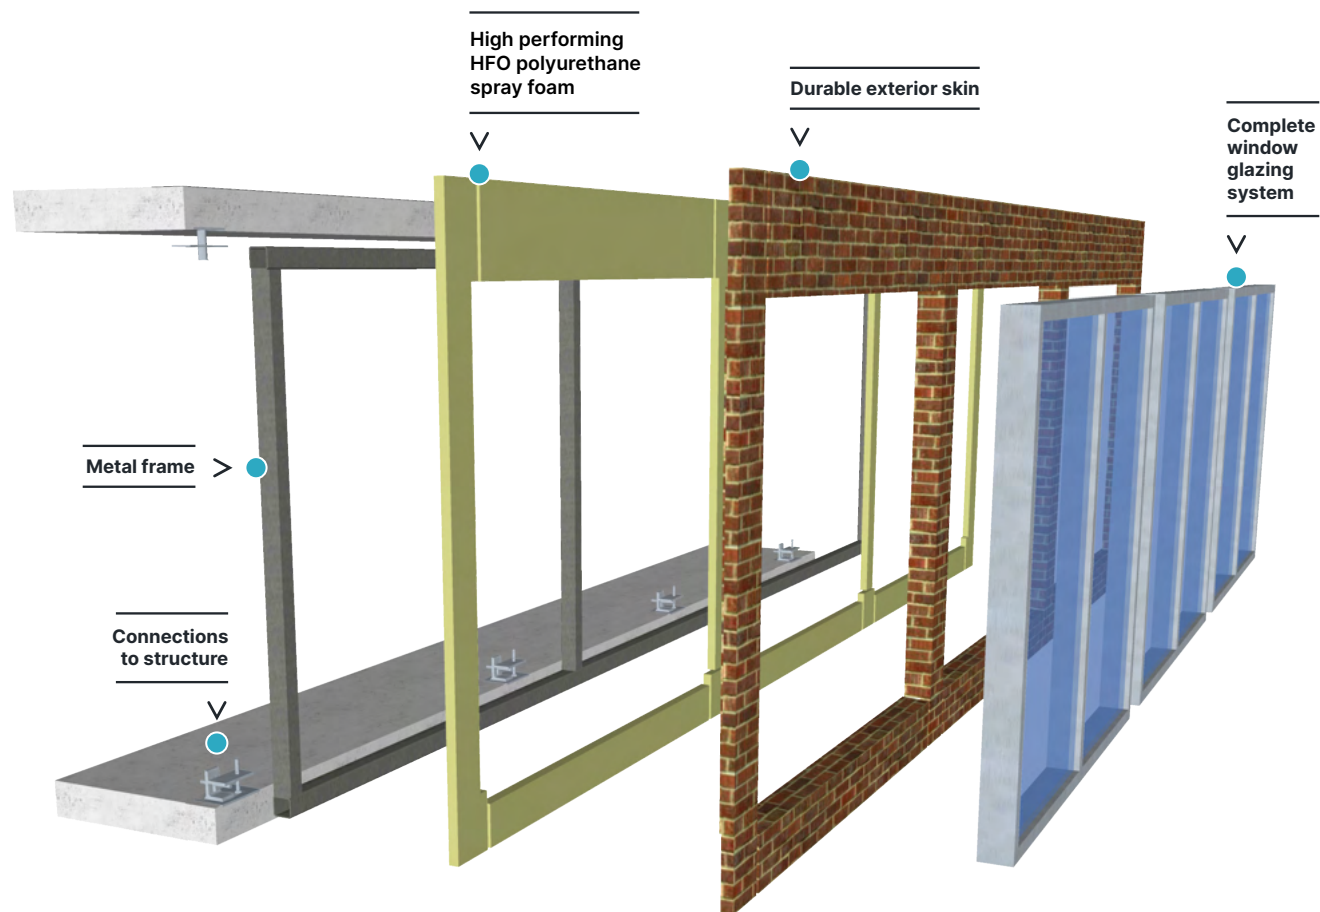

Infinite Facade™ is a single-source building envelope solution, paving the way for design and build teams to take advantage of prefabrication for accelerated schedules, budget certainty while providing design and aesthetic flexibility.

Ensuring constructability and reducing risk, it meets or exceeds code requirements and utilizes structurally proven framing connections.

To meet the window and daylighting needs of the project, select from Infinite Facade 75, 85 or 100 for multiple glazing options. All configurations provide the benefits of prefabrication without compromising design.

KEY BENEFITS

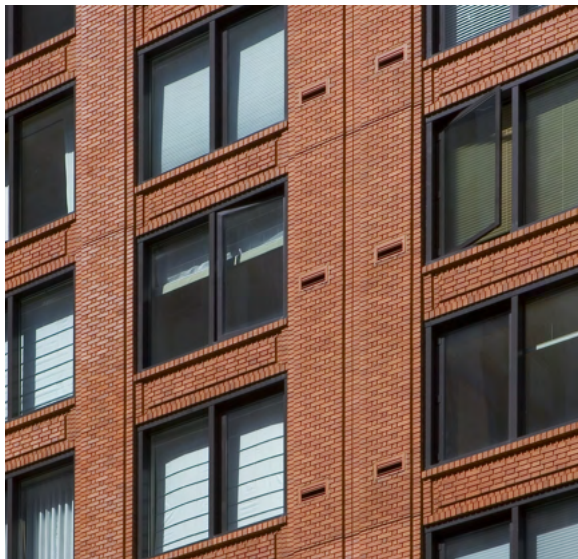

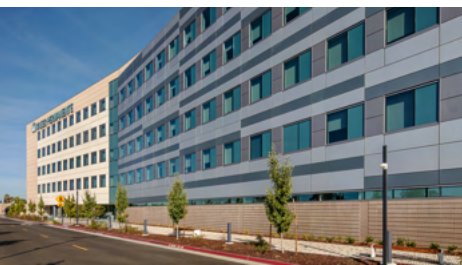

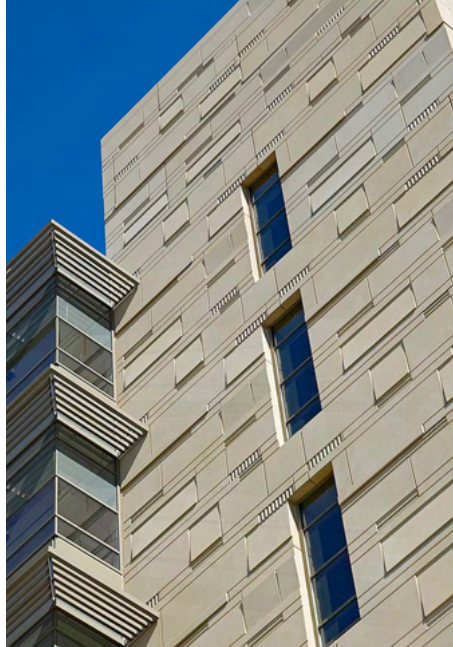

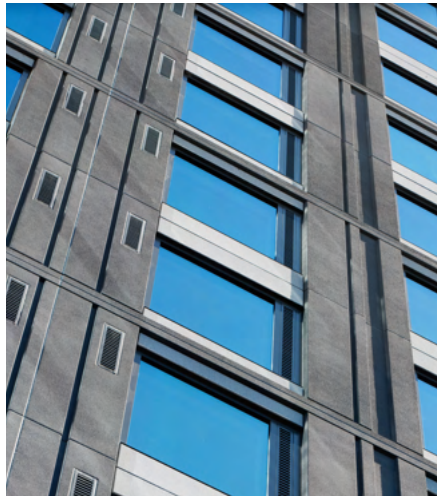

- Aesthetic flexibility, for both materials and finishes
- Resilient and durable materials
- Reduces the load on the structure
- Integrates well with adjacent systems
- Highly energy-efficient system with lower operating costs
- Sustainable design, contains 20% less carbon than traditional concrete systems
- Windows pre-installed in the factory
- Single point of contact for the building envelope warranty

BENEFITS OF PREFABRICATION

- Reduces site impacts
- Accelerates construction schedules
- Ensures constructability
- Provides budget certainty
- Factory quality
- Reduces risk
- Streamlined logistics and shipping processes

Multiple Scopes Single Source Solution

+ 100s more!

Finishes

Our exterior finish options are limitless. In addition to the wide variety of colors and textures currently available in traditional precast, other materials can be cast into the exterior veneer – such as brick, terracotta, and stone. The use of form liners also allows for an endless number of geometric patterns and reveals to be incorporated into the design.

Aesthetic Customization

Glazing elements

Choose from an array of stunning glazing elements to build the perfect facade. Our glazing systems have exceptional water and air penetration resistance.

The panel and the window are designed as a single solution, creating an elegant but durable exterior.

Select from flush and recessed designs with spandrel, colored, and fritted glazing options to meet your project goals.

Infinite Facade 75 is our most cost-effective system, which utilizes punched window openings surrounded by your choice of opaque finishes.

Infinite Facade 75

Infinite Facade 85 allows punched openings to align with the top of the panel and minimizes the occurrence of horizontal joints. It allows for approximately 6" of increased vision from the interior, increasing the total window height.

Infinite Facade 85

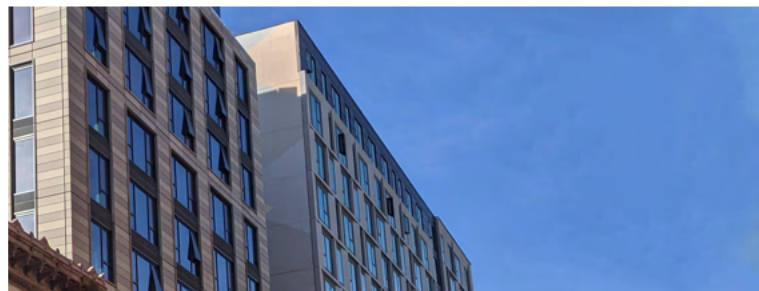

Infinite Facade 100 eliminates sealant joints at the floor line and provides full height, continuous exterior glass, and can accommodate more translucent glass from the interior. This configuration can utilize the Infinite Facade 75 or 85 frame and connection configuration to maximize the extra vision from the interior.
